

SYSTEM AND APPARATUS FOR PROVIDING DUAL INDEPENDENT DISPLAYS

ABSTRACT OF THE DISCLOSURE

5 A video display controller for controlling multiple display devices is disclosed. The video display controller includes a graphics processing unit that is adapted to receive input and transmit output to one or more display devices. The video display controller also includes a single display device connector in communication with the graphics processing unit. The video display controller is adapted to independently control a first display device and a second display device through the display device connector.
